Package        : pdns-recursor
Version        : 3.3-3+deb7u2
CVE ID         : CVE-2016-9139

Florian Heinz and Martin Kluge reported that pdns-recursor, a recursive
DNS server, parses all records present in a query regardless of whether
they are needed or even legitimate, allowing a remote, unauthenticated
attacker to cause an abnormal CPU usage load on the pdns server,
resulting in a partial denial of service if the system becomes
overloaded.

For Debian 7 &quot;Wheezy&quot;, these problems have been fixed in version
3.3-3+deb7u2.

We recommend that you upgrade your pdns-recursor packages.

Further information about Debian LTS security advisories, how to apply
these updates to your system and frequently asked questions can be
found at: <a  rel="nofollow" href="https://wiki.debian.org/LTS">https://wiki.debian.org/LTS</a>
